COMODO
Creating Trust Online®

CDome Definition

100+ signups everyday

Biggest campaign ever yet, is running through all Comodo channels for Dome Shield, landing 100s of new signups everyday. Recently, 200+ SMEs/Enterprises are actively securing their networks using Dome around USA and Europe, which will even grow further with the merging of MSP channel with current Enterprise channel .

Checkout the excellent product that Dome Development Team has built in 2016 and how it outperforms the fierce competition out there:

https://cdome.comodo.com/shield/compare/

Fun fact: Algerian Telecom and a very famous undisclosed Hollywood Movie Studio is some of many active users of Dome Shield.

Financial Institutions Relying on Dome Enterprise

It's been a while since the first release of Dome in early 2016 and number of PoC requests have been growing steadily. Offering served has been -and not suprisingly- intruguing financial institutions because of the ease that it delivers by combinations of cloud modules relieving the pain of running heavy weight on-prem solutions. Great efforts put out by the development has helped Dome to serve various banks and financial institutions.

Feel free to checkout the few of them:

Korumail Definition

Comodo Korumail project consists of 3 core products, namely Korumail Antispam Gateway, Korumail Messaging Suite (Surmail) and OutlookDAV, 2 of which are in maintenance mode.

Korumail team is spending their effort mostly on research and development activities of Comodo Korumail Antispam Gateway, which is a Tubitak supported project and its existing product already has more than 65 enterprise users only in local market and targeting to have all-scale enterprise users in global market during 2017.

Korumail MESSAGING GATEWAY is an enterprise anti-spam and threat prevention appliance that uses a sophisticated array of spam filters, anti-virus scanners and content analysis engines to prevent unsolicited mail from ever entering enterprise's network.
The solution is compatible with all major MTAs (Mail Transfer Agents), integrates easily into existing e-mail structures and is scalable to thousands of users. Messaging Gateway's uniquely intelligent filtering algorithms deliver over 99% accuracy rates on content classification and spam detection, helping it to earn 'Premium' certification from independent testers West Coast Labs.

Korumail Messaging Gateway team is located in Istanbul, YTU Ikitelli Teknopark and OutlookDAV support team is located in Ankara, ODTU Teknopark office.
Short term goals of the project include serving as a multitenant on-cloud service under Dome Product family with Dome Anti-spam Solution brand.

Korumail Activities

- Korumail v6.6.0 introducing Containment feature for malware protection targeting PRO customers has been released.

- Korumail Premium has been announced for FREE users and available at https://korumail.com/korumail-premium.php   for download

- Istanbul and Odessa Antispam teams performed a 3-day wshop to make architectural level design decisions on a cloud-based Dome Antispam solution, by unifying and refactoring existing modules of Korumail and ASG.

COMODO ONE-Portal

New Features

I Welcome Page configuration on user settings menu has been introduced. It will be possible to set module overview pages as welcome.

I Acronis Cloud Backup has been introduced for Enterprise accounts as well.

Improvements:

I Partnership discounts on Reseller Portal are now available for direct purchases from C1 Portal Store process as well.

I When users open a module in a new tab, module name will be visible as tab name.

Bug Fixes:

Registration wizard problem with passwords containing special characters was resolved.

Staff update problem with Acronis integration was fixed.

Reseller labels in role permissions were changed as Partner.

Forgot password link was corrected.

Setting default Comodo License Account was fixed.

New Features

Software Inventory

Admins now can see software inventory that are contained on devices by clicking "Installed Apps" tab under device view. The following information about the applications are displayed on user interface:

- Software Name
- Vendor
- Version
- Installation Date

Admins also can update software inventory list of the device by clicking "Update Software Inventory" button.

Device Inventory

The device list is now presented with a new tree based structure! Device list is placed together with expanded / collapsed device groups hierarchy on both device inventory and under protection device list. Admins now can select the root and see all devices or can select any group and see the devices only under that group.

Logs were displayed under separate tabs for Alerts, Procedures and Monitors under device details. We placed all of these execution logs under one main tab called "Logs" and created separate sub-tabs for each.

Improvements

Patch Management

Execution log for patch procedures are added inside device view.

Service Desk

Device Owner information is provided for Service Desk tickets that are created via tray icon and for monitoring notifications.

COMODO ONE-Service Desk

New Features:

2-Factor Authentication has been implemented in Service Desk direct login pages as well. (2-Factor Authentication can be enabled from C1 Portal.)

Email parameter is added to new tickets created by ITSM agents.

Improvements:

Start Date input parameter controls have been updated and now work with all formats.

"Start Date" and "End Date" part of Advanced Ticket Search query was fixed and it works properly now.

When the organization is deleted from C1 Portal, users with the organization could not be updated. It is resolved.

Creating Trust Online®

Anti-Spam Definition

ASlab's vision is to apply and improve image analysis and text mining expertise so that highly distinguished, outstanding phishing detection solutions can be developed. The goal is to create an expert group which is the sole address for image analysis and data mining technologies.

Anti-Spam Activities

- 1564 enterprises are using Anti-Spam Lab's services to prevent phishing, spam and other malicious emails.

- 8,479 phishing/virus emails and 2,181,656 other malicious emails are caught and blocked, and users are protected.

- 72,681 IPs are added to blacklist.

CTRL

Team

Fatih Demirhan
Software Team Leader

Comodo Threat Research Laboratory (CTRL) provides state-of-the-art security capabilities in order to identify and respond to emerging threats in the digital landscape. Security experts of Comodo participate to collection, processing, exploitation, analysis, production, dissemination and integration activities of cyber intelligence cycle management. The findings of CTRL are also shared with entire security community and the public.

COMODO
Creating Trust Online®

CTRL Activities

- Kenneth Geers (PhD, CISSP — Comodo senior research scientist, NATO CCD COE ambassador, Atlantic Council senior fellow, Digital Society Institute-Berlin affiliate, TSN University of Kyiv visiting professor) presented on Geopolitics, Cyber War and Global Malware Trends at RSA 2017 Conference. Kenneth also had a session with the press about Comodo's advanced endpoint protection enterprise solutions.

Crawler Definition

Crawler project is developed in order to collect information about web pages and domains. The project plays a very important role for lead generation and marketing businesses. Project identifies all the intelligence that may be generated using crawler and/or other internal systems in order to create valuable lead generation to other project/products. Project also finds files while crawling and sends them to AVLAB projects.

Crawler Activities

- Total number of valid SSLs in the system reached to 13,823,422 ; COMODO is the leader with 42% by having 5,763,809 valid certificates.

CIS: Comodo Internet Security

Buket Baran
Product Manager

Comodo Internet Security 10 : Comodo Internet Security is an all in one security suite including CPU Enforced Operating System Virtualization (Kernel level Sandboxing) and True security for online banking and shopping (Secure Shopping) which is provided to endusers for free ofcharge. Most of other Comodo Consumer products such as Geekbuddy and Dragon browser are being distributed within Comodo Internet Security product line. Comodo Internet Security 10 Product line consists of 3 major products as Comodo Internet Security, Comodo Antivirus and Comodo Firewall

Activities:
This month team is mainly focused on C1 tasks. A new release will be done by the beginning of April for the purpose of upgrading V8 users to V10.

COHE: Comodo One Home Edition

Buket Baran
Product Manager

Comodo One Home Edition collects all your mobile and desktop devices reachable in one single portal where you can monitor, manage and control / create parental rules easily. Comodo One Home Edition including an App Store, also provides you the ability to manage your applications on your various devices.

Activities:
Bug fixes continue for the stability releases. A new stabilization release had been done on **21st of February.** Some of the important fixes included are :

- Email alerts are received by the user after removing a device from COHE site and uninstalling COHE app from the device
- The applications list from another device is loaded on refresh
- The device list is black when trying to select a Safe Zone
- When device name is changed, Platform info is lost

COMODO
Creating Trust Online®

CCAV: Comodo Cloud Antivirus

Buket Baran
Product Manager

Comodo Cloud Antivirus uses a powerful combination of cloud based antivirus, automatic containment technology and Valkyrie file analysis intelligent file look up server so that protect your computer from all known and unknown malware seamlessly.

COMODO
Creating Trust Online®

CCAV: Comodo Cloud Antivirus

Buket Baran
Product Manager

CCAV V1.9 has been released on **24ᵗʰ of February .** Below is what's new in this new version release:

Improved:
- Now there is a sea difference in scanning speed. You should be able to complete scan within reasonable time. We have made changes in protocol used by client and there are server side enhancements as well. We are still upgrading server but you can experience much much better performance now.

New:
- There is new GUI with two additional themes as decided via poll earlier:
 https://forums.comodo.com/news-announcements-feedback-ccav/final-round-let-s-vote-ccav-2017-user-interface-desing-options-t116944.0.html;viewresults
- After installation upon completion of Quick scan, you will be prompted to re-start system with option to postpone re-start for certain hours. Re-start of system ensures that CCAV also protects against unknown scripts, which otherwise won't be sandboxed.

Fixes:
- Files with install/setup keyword in path could be uploaded to Comodo even though they were safe.
- Some of temporary files were left out during installation under "Roaming" folder won't be are any longer.

Other changes:
- Quick scan is now default scan after immediate installation. Quick scan scans all files that could be launched on system startup and thus helps detect any active malware and at the same time helps build the cache, so next time when applications are started, results are in cache.
- When CCAV is updated, scan won't auto start upon update like has been the case. We already have 30 day scheduled scan and auto scan upon update has been unnecessary.
- "Sandbox" logs label is changed to "Executed Applications": When you access logs via "View Logs" section, earlier we had Sandbox section but within that we also had trusted installer entries differentiated by Type column, this was misleading as there were safe application entries as trusted installer mis intepreted if they ran in Sandbox.
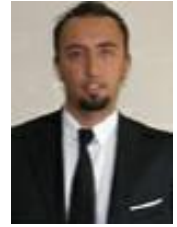

Comodo Secure Shopping :

Buket Baran
Product Manager

Activities:

Team is working on the improvements on http alert system and phishing protection. New build is aimed to be release by the beginning of April.

Comodo S3: Server Security Server

Oytun Yavuz
Product Manager

Comodo S3 is a centralized cloud based management system that provides businesses with a secure, reliable and consistent structure.

It is an Server Security Server (S3) that provides digital certificates management, vulnerability check and malware detection, payment systems compliance and patch management. It makes management easy and reduces the administration time, costs associated with managing all of them.

Comodo Server Security Server (S3) allows customers to manage the purchase, installation and lifecycle of SSL certificates on IIS and Apache web-servers. Customers can also run scans to discover and import all existing certificates their network, and can use the SSL checker tool to identify whether a certificate is correctly configured.

Activities:

* Version 2.1 was released.

    SSL certificate discovery tool.

* Help documents were updated according to this release.
* Related tutorials were added according to this release.
* Continue to analyze PCI compliance and server security functions.

COMODO
Creating Trust Online®

CSB: Comodo SecureBox

Oytun Yavuz
Product Manager

SecureBox provides an secure environment for application running in it to prevent the application from being injected/sniffed/controlled by other processes. Unlike Sandbox, it treats all outside processes as hostile.

SecureBox provides a controlled, non-modifiable environment in which critical applications will run, immune to threats and attacks.

Its lightweight, yet comprehensive approach to containment makes SecureBox optimal for securing uncontrolled or insecure endpoints

SecureBox Management Console provides secure application control of the endpoints by applying different policies on groups. It will gather all the reporting and email triggering for alerts.

Activities:
- CSB version 2.13.407709.458BR was released.
    Support Chrome browser.
    Prevent acquiring passwords in secure application by reverse engineering.
- CMC version 1.11.407222.118R was released.
    Support Audit log on CMC.
    Update policy status.

COMODO
Creating Trust Online®

CSB: Comodo SecureBox

Oytun Yavuz
Product Manager

Korumail:
It is an enterprise antispam and threat prevention appliance that uses a sophisticated array of spam filters, anti-virus scanners and content analysis engines to prevent unsolicited mail from ever entering your network.

AntiSpam Gateway (ASG):
ASG is a cloud-based (SaaS) pre-perimeter defense against spam, phishing emails and virus-infected attachments. It provides e-Discovery of users, Active Directory and LDAP integration, mail backup archive and spooling.

Dome Antispam (DAS):
DAS is an enterprise antispam and threat prevention appliance as a module of CDome. It is a rebranded product of KoruMail Pro version.

Activities:
Korumail Premium and Pro products was released with v6.6.0.
Korumail web site was updated and new pages were added for Premium product.
ASG domain validation feature was developed.
DAS marketing colleteral materials were prepared for C1 integration.

COMODO
Creating Trust Online®

Valkyrie - Geekbuddy

Alper Güngör
Product Manager

Valkyrie:

Valkyrie accepted 97K file upload during this month. 95% of those files are processed successfully.

Valkyrie automated verdict analysis system processed 87K file this month.

Valkyrie system has given final verdict to 138K unknown files this month.

Valkyrie system has returned a verdict to 25M clients successfully.

Valkyrie and Forensic Analysis Tool integration has been released.

Valkyrie Kill Chain Report has been released.

Kill Chain Reporting mechanism presented at RSA and it gathered significant interest.

Geekbuddy:

Alert Mechanism Bug has been resolved.

Metrics collection system has been rebuilt.

Technician Console disposition mechanism has been implemented.

On boarding coach mark screens and new license update pages have been implemented.

Printer and Web Cam Modules for TUBITAK has been implemented.

Chat Bot has been implemented for TUBITAK.

Some conferences Comodo attended in the month of January:

Video interview with Erdem Eriş and the Comodo article got published in "thepercept":
Erdem Eriş said "Security will be the priority in the Future"
Comodo, a leading corporate in the area of security with its advanced methods is also known as the world's number one certificate provider.
You may read the full article and watch the video interview:
http://www.thepercept.com/comodo-security-will-priority-future-erdem-eris/
The CIS10 Release news continued to find place in the media

Comodo, Internet Security 10'u Piyasaya Sürdü

Küresel düzeyde yenilikler üreten siber güvenlik çözümleri geliştiricisi ve dijital sertifikalarda dünya lideri Comodo, Comodo Internet Security 10'u (CIS) piyasaya sürdü.

CIS 10, zararlı yazılımlara karşı güçlü bir kalkan sunacak şekilde geliştirildi. Bu benzersiz araç "Güvenli Alışveriş, Uygulamaların Engelini Kaldır ve Sanal Masaüstü" gibi özellikleri yoluyla tarayıcılar ve tüm uygulamalar için çevrimiçi bankacılık ve alışverişe yönelik olağanüstü güvenlik sağlıyor. Söz konusu özellikler çok çeşitli siber güvenlik ihtiyaçlarına cevap verecek şekilde isteğe göre ayarlanabiliyor.

Comodo'nun; kullanıcı dostu, güvenilir ve endüstri lideri default-deny (bilinmeyeni engelleyen) güvenlik yapısı, CIS'in ana unsuru olan kusursuz koruma özelliğini geliştiriyor ve yanlış pozitifleri tamamen

yok edip sıfırıncı gün saldırılarını engelleyerek dosyaların yüzde 100'ünde güven sağlıyor. Güvenli alışveriş özelliği sayesinde kullanıcılar çevrimiçi bankacılık ve alışveriş sitelerini yüksek güvenlikli bir ortamda açabiliyor ve böylelikle bilgisayar korsanları veya zararlı yazılımlar tarafından hacklenemiyor, izlenemiyor veya görüntülenemiyor.

Comodo'nun Mühendislikden Sorumlu Kıdemli Başkan yardımcısı Egemen Taş, "CIS'i geliştirirken basitliği, kullanım kolaylığını ve tutarlığı artırıp aynı zamanda Comodo'nun benzersiz otomatik tehdit önleme teknolojisi yoluyla kusursuz koruma yaratmaya odaklandık" dedi.

Taş, bu noktada Comodo'nun internette güvenliği herkese hak gören yaklaşımına da dikkat çekerken, "Güvenlik ve koruma, CIS'in mihenk taşları ama ürünümüzün

erişilebilir olması da bizim için aynı derecede önemli. Güvenliğin bir lüks değil, hak olduğuna inanıyoruz ve tüm interneti her geçen gün daha da güvenilir kılmak yolunda adımlar atıyoruz" diye konuştu.

➢ **Comodo Extends Advanced Endpoint Protection to Mac OSX and Linux Systems**

Comodo Advanced Endpoint Protection (AEP) product that extends availability of its superior default-deny endpoint security to Mac OSX and Linux platforms, in addition to Microsoft Windows. It also adds many new capabilities, including enhanced Secure Auto-Containment™, protection against emerging fileless malware attacks and remote admin access and remote control.

"The anti-malware industry is clearly broken because it has been chasing its own tail with a default-allow security approach that, by definition, is going to allow malware infections," said Melih Abdulhayoglu, CEO and founder of Comodo. "The only effective way to stop zero-day, unknown threats is for our industry to move to a default-deny security posture—an auto-containment platform like Comodo's AEP that stops giving unknown files unfettered access to computer resources."

Ekonomist: http://www.ekonomist.com.tr/pano/comododan-gelismis-koruma.html
